COMPOSITES for lasting PERFORMANCE

Inside profiles for Buses and Coaches.

Exel is a leading composite technology company in Europe that designs and manufactures composite i.e. glass- or carbon fibre reinforced profiles for industrial applications and sports equipment. Exel was founded in 1960 and has been listed on the Helsinki Stock Exchange since 1998.

Pultrusion and **Pullwinding** technologies enable us to create optimised structures for each product according to customer requirements. In addition our **Continuous lamination** process provides thin carbon and glassfibre sheets with very good mechanical properties.

Our long experience and ongoing product development ensures the most optimised solutions for our customers to keep them at the leading position in their field of business.
